

Magnetic Contactors and Magnetic Starters

Exceed your expectations

Mitsubishi's Magnetic Contactors and Magnetic Starters, continuously pushing the boundaries.

MS-T Series

Mitsubishi Magnetic Contactors and Magnetic Starters

Mitsubishi's Magnetic Contactors and Magnetic Starters continue to push the boundaries.

MS-A Series

Double ratings of AC3 grade (Green) and AC4 grade (Red) were adopted allowing the unit to be downsized.

MS-A Series was released.

1933

1953

1960

1963

1968

1976

1982

1984

MS Series was released.

EM Series was released.

ES Series was released.

EK Series was released.

EC Series was released.

EM Series

Mitsubishi Electric introduced its own design of horizontal movement Magnetic Contactor with the EM series.

EK Series

In cooperation with Westinghouse Electric Corporation, the clapper type EK Magnetic Contactor was developed.

Mitsubishi Electric began making Magnetic Contactors and Magnetic Starters in 1933 with the first EC Series products. Since then consecutive new products and series have been highly appreciated by our customers. Our commitment to our customers remains to continuously develop our products to exceed their expectations.

MS-T Series is released.

The Motor Circuit Breaker was released.

The 80th anniversary

US-N Series was released.
Sales of Magnetic Starters
exceeded 100 million units.

US-H Series was released.

SD-Q Series was released.

MS-N Series was released.

US-K Series was released.

MS-K Series was released.

MS-K Series

Lower power consumption was achieved through the use of AC operating, DC excited electromagnets.

MS-N Series

The ground breaking "CAN terminal" proved to be an epoch making step in the design of Magnetic Contactors.

Desire to
down-size the
switchboard

Desire to
reduce the types
and stock of
switchboard
parts

Desire to
prevent
accidents such
as electric
shock

Do these
requirements
sound familiar?

The new MS-T Series can help you
solve these issues.

Down-sizing

Small

10A frame model is over 16% smaller with a width of just 36mm!!

There is a saying that "every bit helps" and now with the industries smallest* general purpose Magnetic Contactor in its class, customers are able to more easily down-size their boards than ever before.

For AC-operated 10A frame class general-purpose Magnetic Contactor (based on survey conducted by Mitsubishi dated September 2015)

Example: Status where 5 units are arranged

S-T10 (actual size)

Reduction
by 7mm!

(For mounting details, please refer to "mounting on Page 14.")

S-T50 (actual size)

Reduction
by 13mm!

The optimized high-temperature gas discharge structure and arc runner shape streamline the outline dimensions!!

Standardization

Standardization

New integrated terminal covers

Target frame : 10A to 50A frame

The perennial issues of remembering to order the terminal covers, fitting them correctly or losing them in the process are challenges of the past. The integrated terminal cover system means they are always there, on the Magnetic Contactor or its Auxiliary contact, ready to be used.

Reduce your coil inventory by up to 50%

Target frame : 10A to 35A frame

The 14 types of operation coil ratings available with the SN Series have been halved to 8 types with that increasing the applicable voltage range. Users can reduce their inventory, and by integrating the types of coils manufactured, a shorter delivery can be realized.

Coil designation	Rated voltage [V]	
	50Hz	60Hz
AC12V	12	12
AC24V	24	24
AC48V	48-50	48-50
AC100V	100	100-110
AC120V	110-120	115-120
AC127V	125-127	127
AC200V	200	200-220
AC220V	208-220	220
AC230V	220-240	230-240
AC260V	240-260	260-280
AC380V	346-380	380
AC400V	380-415	400-440
AC440V	415-440	460-480
AC500V	500	500-550

Coil designation	Rated voltage [V]
	50Hz/60Hz
AC12V	12
AC24V	24
AC48V	48-50
AC100V	100-127
AC200V	200-240
AC300V	260-300
AC400V	380-440
AC500V	460-550

* The conventional eight types are available for the 50A and larger frames.

By integrating the electromagnetic field analysis and drive analysis, inconsistency in the electromagnetic attraction force is suppressed and rise of the coil temperature is reduced.

OFF state

ON state

When AC150V 60Hz is applied on AC200V coil

Capable of direct drive with transistor output of PLC, etc

Target frame : 10A to 32A frame *DC-operated models

The adopted high-efficiency polarized electromagnet greatly reduces the coil power consumption, and enables all models to be directly driven with a DC24V, 0.1A rating transistor output. (DC24V coil)

	Conventional Model	New Model	Lowering Rate
13A Frame (Coil:DC12/24V)	7W	2.2W	69%
20A Frame (Coil:DC12/24V)	9W	2.2W	76%
32A Frame (Coil:DC12/24V)	-	2.2W	-

*DC48V to 220V:3.3W

Safety & Quality

Safety & Quality

Terminal cover with finger protection function

Target frame : 10A to 50A frames

In addition to the Magnetic Contactor, a terminal cover has been provided as a standard for the thermal, magnetic relay and auxiliary contact unit options. This realizes a finger protection function that complies with the DIN and VDE Standards, prevents electric shocks, and increases safety during maintenance and inspections.

[Finger Protection]

In the provisions regarding worker safety and accident protection during use of low-voltage switchgear and controlgear assemblies set forth with DIN EN 50274/VDE 0660 Teil 514, the range for providing protection against contact of live sections is divided into "Finger Safe (preventing finger contact)" and "Back of hand safe (protecting back of hand contact), and standards are provided. The MS-T Series terminal cover satisfies the requirements of these provisions.

A light touch

Target frame : All S-T Series

The MS-T Series' auxiliary contacts can operate with load as light as 20V 3mA making it suitable for direct control/operation from a PLC output.

Smart wiring

Smart Wiring

Smart design means Smart wiring

Target frame : 10A to 50A frames

The integrated terminal covers have an additional benefit in that they act as a guide to improve wiring efficiency but also retain the terminal screw in place: no mislaying the screw, no dropping it or having trouble reinserting it in to the terminal block just fast efficient wiring. Fast wiring terminals (model name with suffix "BC") are also available to further improve wiring efficiency, workability and hence productivity.

① Screw holder lifts up the screw.

② Insert a ring crimp lug

③ Tighten the screw

Easy wiring!

Easy branch circuit wiring with Motor Circuit Breaker and optional connection conductor unit

Target frame : 10A to 32A frames

Easy wiring is available for the new MS-T Series by using the Motor Circuit Breaker and optional connection conductor unit, contributing your productivity improvement.

Global Standard

Global S Standard

Complies with main International Standards

In addition to compliance with the main International Standards including IEC, JIS, UL, CE, and CCC, we plan to acquire compliance with Shipping Standards and other International Standards. We hope to contribute to your business expansions overseas.

Standards	Applicable standard					Safety certification standard
	International	Japan	European countries		China	U.S. & Canada
	IEC ^{Note}	JIS	EN EC directive	Certificate authority	GB	c  us
				 TÜV Rheinland		

Note : Also compliant with the requirements for mirror contacts comply with IEC60947-4-1 Annex F.

Higher SCCR value achieved by using with Motor Circuit Breaker

When the MMP-T Series and the MS-T Series are used together, the higher SCCR (UL short-circuit current rating) value, can be achieved. That will be a great support for your business in North America.

* Refer to page 47 for the SCCR values for the Magnetic Contactor and Thermal Overload Relays.
For details on the SCCR value when used in combination with the Motor Circuit Breaker, refer to the Motor Circuit Breaker catalog.

Note 1: — indicates out of manufacturing range, and * indicates to be released soon.

Note 2: The value given in brackets for the Class AC-3 rated capacity applies to the enclosed Magnetic Starter.

Note 3: The T65 to N800 type AC operation coils are a surge absorber-installed type so the coil does not generate an open/close surge. Therefore, the surge absorber for coils is not required.

Note 4: The +2b for the T10 to T20 auxiliary contact arrangements in the Reversing type represents the b contact built into the UT-ML11 interlock unit. This does not need to be specified when ordering.

Note 5: For the auxiliary contact arrangement in the reversing type, the auxiliary contact arrangement

combination for two Magnetic Contactors is indicated as x2. When using the standard contact arrangement, there is no need to make a special designation, but when using the special arrangement, designate the contact arrangement for two units.

<Designation example> In case of 1b × 2 + 2b: 2B

Note 6: The auxiliary contact arrangement for the mechanically latched type differs from the delay open type.

	SRD-□SA	○	○

Note 1: — indicates out of manufacturing range.

Note 2: Refer to the individual rating table for the contact rating when using a type with large capacity contact or type with overlap contact. The value given in brackets is the value for switching the load with two poles installed in a series.

Note 3: When using the mechanically latched type (SRL-□, SRLD-□), one each can be mounted on the opening coil and closing coil.

Note 4: Only the side-on auxiliary contact unit UT-AX11 can be mounted on the mechanically latched type SRL-T5 or SRLD-T5. Only UN-AX11 can be mounted on SRL-N4 or SRLD-N4.

Note 5: Both the surge absorber unit and DC/AC interface unit cannot be additionally mounted onto the Contactor Relay's coil terminal.

Note 6: A live section protection cover is provided as a standard.

Note 7: The minimum applicable load level for the contacts at the SR(D)-T9 head-on section (four terminals on upper level) is the same as UT-AX2/4.

About Handling

Note

Precautions for Use

- ⚠ Be sure to periodically check the Magnetic Starters and apply danger prevention measures on the sequence of important circuits. (The Magnetic Starters contacts may suffer from defective continuity, welding, and burning.)
- ⚠ When performing installation, wiring, and maintenance & inspection, be sure to disconnect the Magnetic Starters from the power supply. It may cause electric shock. In addition, the malfunction attributable to vibration, impact, and false wiring may exert serious results (machine malfunction, short-circuiting of power supply, etc.) on the Magnetic Contactors.

Performance

The performance described in this catalog is based on the result of a test conducted under the conditions specified in the Standard (IEC60947-4-1 "Low-voltage switchgear and controller" etc.). If actual use condition is different from this test condition, the user must evaluate the condition (by using an actual device).

Use condition

Although the device can operate without any problem when under the conditions described in this chapter, be careful about the following matters.

(1) Ambient temperature

Even when the device is used in accordance with normal usage, deterioration of the insulation will progress.

In particular, as the ambient temperature increases, the insulation life is shortened. In general, it is said that every time the ambient temperature increases by 6 to 10°C, the insulation life decreases by half (Arrhenius law). In a case where the ambient temperature is high and voltage exceeding the rated voltage is continuously applied to coil, the coil temperature increases and life may be shortened dramatically.

(2) Vibration/Impact

Although vibration of 19.6m/s² and impact of 49m/s² do not cause contact malfunction, even when the vibration and impact are below these values but are applied continuously, fatigue failure may cause some trouble.

In particular, please note that the resonance of an installed board may exert a large vibration on the product.

Usage environment

- (1) Ambient temperature : -10°C to 40°C
(Applied to the outside of the control board) Average daily atmospheric temperature: 35°C (Max.), Average yearly atmospheric temperature: 25°C (Max.)
- (2) Maximum temperature of the : 55°C However, the ambient temperature of boxed MS type is 40°C (Average yearly temperature of the inside of the control board is 40°C or less.).
inside of the control board Please note that the operating characteristics of the Magnetic Contactors and Thermal Overload Relays may vary with the ambient temperature.
- (3) Relative humidity : 45% to 85% RH However, dew condensation and freezing should be avoided.
- (4) Height above sea level : 2000 m or less
- (5) Vibration : 10 to 55 Hz, 19.6 m/s² or less
- (6) Impact : 49 m/s² or less
- (7) Atmosphere : Inclusion of dust, smoke, corrosive gas, moisture, salt content and the like in the atmosphere should be avoided as much as possible.
Please note that continuing to use the device in a closed condition for a long period may cause contact failure.
Never use the device under an atmosphere that contains flammable gas.
- (8) Storage temperature/Relative humidity : -30°C to 65°C 45% to 85% RH However, dew condensation and freezing should be avoided.
The storage temperature is ambient temperature during transportation or storage and should be within the usage temperature when starting to use the device.

Mounting

Direct mounting

- (1) The device should be mounted in a dry location low in dust and vibration.
- (2) The normal mounting direction is the direction shown in Fig. 1 on a vertical surface, but mounting the device at an inclination angle of up to 30 degrees in either direction is allowed. (Fig. 2)
- (3) Mounting the device on a floor or ceiling is not allowed. (Mounting the device on a floor or ceiling may affect the continuity performance, operation performance, and durability of the contact.)
- (4) If mounting the device in a horizontal orientation cannot be avoided, be sure to rotate the device by 90 degrees in a counterclockwise direction from the normal mounting direction as shown in figure 3 when mounting it.
If the device is mounted in a horizontal orientation, its characteristic is nearly unchanged but mechanical durability may be deteriorated. Horizontal mounting of reversing type is not allowed.

Fig.1. Normal mounting

Fig.2. Inclined mounting

Fig.3. Horizontal mounting

● Tightening torque of mounting screw

The device should be mounted by force of tightening torques shown in the right table.

Screw size	Tightening torque of mounting screw N·m
M4	1.2 to 1.9
M5	2.0 to 3.3

● Mounting of IEC 35mm wide rail

- (1) The T10 to T80 types and SR-T type can be mounted on the IEC 35mm wide rail as a standard.
- (2) DIN, EN, IEC, and JIS C2812 standards-compliant 35mm wide rails come in two types: 7.5mm and 15mm in rail height. Their shapes and dimensions are as shown in the figure below.

Rail	Rail specifications
1	TH35-7.5 Rail width: 35mm, Rail height: 7.5mm
2	TH35-15 Rail width: 35mm, Rail height: 15mm

- (3) Maximum pitch of rail mounting screw L(mm)

When mounting a rail on a surface of the board, be sure to keep the rail mounting screw pitch below the dimension shown in the following table in order to secure sufficient mechanical strength.

Frame Rail	T10, T12, T20, T21, T25, T32, T35, T50, T65, T80	SR(D)-T5, T9
TH35-7.5	250	
TH35-15	500	

● Mounting space and arc space

When mounting the Magnetic Contactors side by side, be sure to keep the devices isolated by a distance longer than the dimension shown in the following table. Also, the Magnetic Contactors and adjacent grounding metal should be isolated by a distance longer than the dimension shown in the following table. The content described in () is applied when additionally mounting auxiliary contacts.

Although an arc space is not required in front of the Magnetic Contactors, providing a space longer than the E dimension shown in the following table is recommended in consideration of variation in the Magnetic Contactor's depth dimension, and vibration caused when turning on or releasing the contactor.

Mounting space and arc space

Frame	Minimum mounting space				Front arc space (Note 1)	Front mounting space E
	A(A ₁ , A ₂) dimension [mm]	B(B ₁ , B ₂) dimension [mm]	C (C ₁) dimension [mm]	D dimension [mm]		
T10	41 (A ₁ =53, A ₂ =65)	5 (Note 2) (B ₁ =17, B ₂ =29)	10 (C ₁ =22)	15	0	5 (Note 3)
T12	48 (A ₁ =60, A ₂ =72)					
T20	68 (A ₁ =80, A ₂ =92)					
T21	48 (A ₁ =60, A ₂ =72)					
T32	80 (A ₁ =93.5, A ₂ =107)					
T35	98 (A ₁ =111.5, A ₂ =125)	10 (Note 2) (B ₁ =23.5, B ₂ =37)	10 (C ₁ =23.5)	25	0	5
T50	110 (A ₁ =124, A ₂ =138)	10 (Note 2) (B ₁ =24, B ₂ =38)				
T65	48 (A ₁ =60, A ₂ =72)	5 (Note 2) (B ₁ =17, B ₂ =29)				
T80	48	5 (Note 2)	10	15	0	3
T100	48	5 (Note 2)	10			
SR(D)-T5	48	5 (Note 2)	10	15	0	3
SR(D)-T9	48	5 (Note 2)	10			

Note 1. The value of this arc space is a value of IEC and JIS Standards-based closed circuit shut-off capacity test.

Note 2. Although the B dimension of T10 to T32 allows closely-attached mounting, when continuing to apply current to the device or when mounting a product high in open/close frequency and high utilization on the same rail, the device life may be shortened in terms of temperature increase and impact, so please keep the space between the devices over the minimum value shown in the above table as much as possible when mounting them.

Note 3. E dimension is 3mm when mounting UT-AX2 or UT-AX4 with contactors.

About Handling

Note

Connection

● Applicable electric wire size and tightening torque and terminal dimension of terminal screw

⚠ This may cause overheating or fire. Be sure to properly keep the tightening torque and periodically re-tighten the screw.

However, please note that tightening the screw under the status where oil is adhered to the terminal portion may damage the terminal screw even within the existing tightening torque. Electric wires should be properly connected according to the electric wiring diagram. Tightening the terminal screw should be properly conducted within the tightening torque shown in the right table. Insufficient tightening of the terminal screw may cause overheating or cause the electric wire to drop off. Excessive tightening torque may damage the tightening screw. Adhesion of rock paint, thermo label, etc. to electric wire connection or contact may cause heat generation due to defective continuity, so this is very dangerous.

The main circuit terminals for the T10 to T50 and TH-T18 to T50 types can be wired connected by single wire, stranded wire or crimp lug. The main circuit terminals and operating circuit terminals of the T10 to T50 and TH-T18 to T50 types are self-lifting terminals that are easy to connect.

Model	Terminal dimension and size/type of screw				Applicable electric wire size [φmm, mm]		Connection conductor thickness (D) [mm]	Applicable crimp lug size (JST Cat No.)		Tightening torque of terminal screw[N·m] Reference values are given in brackets.

TH-T100 (Load side)	15×7.5×10	M6×12			(8 to 38) Note 3		3.7	14-6 to 22-6 38-S6		3.5 to 5.7	

Note 1: The dimension of the main circuit terminal is a dimension for board conductor wiring. (See the right diagram) The board conductor thickness (D dimension) must be below the allowable connection conductor thickness stated above because of the length of the terminal screw. In case of wiring with two boards used, the total value of two boards must be below the value (D dimension) shown in the table.

Note 2: In each terminal, two wires or two crimp lugs are allowed to be connected.

Note 3: The cross slot screws with pressure plate of T Series and those of N or other Series are same in size but different in pressure plate dimension, so please avoid the mixed use of such screws. This may break the insulation barrier or make the wire likely to fall out.

Note 4: When using IEC60529-based finger safe specification, be sure to use an insulation tube-attached crimp lug.

Note 5: Tightening the terminal screw excessively without wiring may break the screw and consequently disable the tightening, so please avoid such excessive tightening.

Note 6: Operational circuits are coil terminals of Magnetic Contactors and control circuit terminals of Thermal Overload Relays.

● Application to a circuit exceeding 380V

- (1) When applying MSO, S-T10, T12, T20, MSOD/SD-T12, T20, SR(D)-T5, T9, and TH-T18 types to a circuit exceeding 380V to set a crimp lug wiring, please use an insulating tube-attached crimp lug.
- (2) When applying such parts to a Reversing type circuit exceeding 500V, please use an SR-T type Contactor Relays (XF, XR) as shown in the right figure to set the switching time allowance.

● Wiring direction

Although the upper terminal side is usually set to the power supply side when wiring, the lower terminal side may be set to the power supply side when it is unavoidable due to some reason of the board wiring. **However, the mounting direction must be in accordance with the description on Page 14.**

Operating circuit

- ⚠ Applying a low voltage that does not operate the Magnetic Contactors to the operating circuit may cause overcurrent to the coil, which may cause the coil to be burned in a short time.
- ⚠ If the operating circuit wiring is too long, when the coil's instantaneous current flows, the wiring impedance may cause a reduction in the coil voltage, so that the operating circuit may fail to be activated. And, the stray capacitance of the wired line may cause the coil's excitation not to be released even when releasing the excitation.
- ⚠ Use in a circuit (inverter) with high harmonics and high frequency levels can burn the operation coil or surge absorber with CR in the S-T65 to T100 type Magnetic Contactors.

Power supply voltage fluctuation range for operating circuit

- (1) Operating voltage
When the rated voltage and frequency are applied to the coil at an ambient temperature of 40°C (Inside temperature of the board: 55°C), the device operates without any problem at 85 to 110% of the rated voltage of the coil after the temperature increases and becomes saturated.
- (2) Voltage/Frequency and coil rating of operating circuit
The voltage/frequency of the operating circuit and the same of the operation coil must be matched.
Applying a voltage exceeding 100% of the rated voltage to the operating circuit when using the coil may acceleratedly deteriorate the coil insulation and consequently reduce mechanical durability, so set the coil's average voltage to 95 to 100% of the rated voltage when using the coil.

Driving Magnetic Contactor with Triac control

The electromagnet in the S-T65 to T100 type Magnetic Contactor incorporates the capacitor-drop type AC operated DC excited method using the capacitor drop. Thus, a Triac with voltage resistance that is 2/2-fold the circuit voltage must be selected.
If the Triac voltage resistance is low, use of a varistor in parallel with the Triac is recommended.

Using with square wave power supply

The electromagnet in the S-T65 to T100 type Magnetic Contactor incorporates the AC operated DC exciting method using the capacitor drop. It cannot be used with a square wave as the coil's exciting current will increase greatly.

Application to special environment

- ⚠ Please note that the operating characteristics of the Magnetic Contactor and Thermal Overload Relay may vary with the ambient temperature.

High temperature

When using Magnetic Starters or Magnetic Contactors at high ambient temperature, the temperature may mainly affect the insulation life (continuous electric conduction life) of the operation coil and the aging variation of the molding component.
MSO and S-T type without a box are standard products available even at the inside temperature of 55°C.

Low temperature

Although the Magnetic Contactors may be transported to a cold region or used in such a cold region or under cold conditions such as those found in a refrigerator with the contactor incorporated in a switchboard, the S-T type Magnetic Contactors is applicable as a standard product. Also, MSO-T type Magnetic Starters and TH-T type Thermal Overload Relays of low temperature specification are not manufactured.

Low-temperature-based products: S-T□, S-2xT□ types

Applicable temperature range of low-temperature product: Operating temperature -50 to 55°C, Storage temperature -60 to 65°C

Corrosive gas

S-T type Magnetic Contactors is of corrosion resistance-increased specification as a standard product.

Corrosive gases that exist in an environment with an Magnetic Starters or Magnetic Contactors used are gases such as sulfurous acid (SO₂), hydrogen sulfide (H₂S), chlorine (Cl₂), and ammonia (NH₃), and conductive portions can be protected by plating a metal resistant to such gases on the portion. However, because there is no adequate corrosion prevention method for the contact, such gases may increase the contact resistance, resulted in increased temperature.

Additionally, if the environment contains some corrosive gas but is under dry condition, this may delay the progression of corrosion, so using the switchboard with the inside kept as dry as possible is also one of the corrosion prevention methods.

In the Magnetic Starters and Thermal Overload Relays, corrosion-prevented products (MSO-T□YS, TH-T□YS) of the specification with increased corrosion resistance to such corrosive gases are also manufactured.

Dust

Magnetic Starters and Magnetic Contactors used in an iron foundry, construction site, or powder conveying machine tend to be subject to a relatively large amount of dust. When using the control board in such locations, the board must be dust-prevention-structured. Also, using the board under hermetically-sealed condition for a long period may cause contact failure.

Export of the products to tropical regions

The environment of exported products which pass through tropical regions tends to be of high temperature and high humidity, and humidity is the environmental factor that affects the Magnetic Starters and Magnetic Contactors most severely. Humidity is the biggest rust-generating factor and the exported products must be in a structure resistant to humidity.

Therefore, it is recommended to put a moisture absorbent (Silica gel) in an amount of 3kg or more per m³; so as to lower the humidity.

Specification List Table

● Magnetic Starters/Magnetic Contactors (AC operated)

Frame				T10	T12	T20	T21

	IEC 35mm rail mounting			Possible (excluding Enclosed Magnetic Starters)					

Note 1: The figure in the square brackets indicates the rated current shown on the rating plate of the product at which the category AC-3 opening/closing durability is 2,000,000 times (1,000,000 times for the T20 380V). Refer to the electric durability curve for the life performance.

Note 2: The content within () of rated capacity and rated operational current is applied to the Magnetic Contactor.

Note 3: The T10 to T50 types can be manufactured with a coil surge absorber-mounted type (□-□SA type). The UT-SA21 type can be mounted.

Note 4: +2b of T10 and T12 auxiliary contact arrangements in Reversing type represents b contact built in the UT-ML11 interlock unit.

Note 5: The main unit and auxiliary contact block must be prepared separately and additionally mounted by the user.

Note 6: For auxiliary contact arrangement in Reversing type, X2 is displayed as combined auxiliary contact arrangement of two Magnetic Contactors. Please specify the contact arrangement for which two main units are combined must be designated. <Designation example> In case of 1b x 2 + 2b: 2B

Note 7: Operational coil input and coil consumption are average values in case of applying 220V60Hz to AC200V coil.

Note 8: Refer to pages 36 for the mountable options.

Note 9: 1,000,000 times for T20 AC-3 Class 380V or higher, and 15,000 times for AC-4 Class. 15,000 times for T35 to T100 AC-4 Class 380V or higher.

Electrical Durability Curve

Main circuit voltage 220 to 240VAC

Main circuit voltage 380 to 440VAC

Coil Ratings

Coil types and ratings (Alternating voltage operation type)

For S-T10 to T100 types For SR-T5 and T9 types

Coil designation	Rated voltage [V] 50Hz/60Hz	Marking on the equipment
AC24V	24	Rated voltage and frequency
AC48V	48-50	
AC100V	100-127	
AC200V	200-240	
AC300V	260-300	
AC400V	380-440	
AC500V	460-550	

Note 1 : Even when the single rating (example: 200V60Hz) is specified for an order, the above rating voltage is indicated on the product.

Note 2 : Even when the single rating (example: 200V60Hz) is specified for an order, the above rating voltage is indicated on the product.

For S-T10SA to T50SA types For SR-T5SA and T9SA types

Coil designation	Rated voltage [V] 50Hz/60Hz	Coil indication	Varistor voltage [V]
AC24V	24	Rated voltage and frequency	120
AC48V	48-50		120
AC100V	100-127		470
AC200V	200-240		470
AC300V	260-300		910
AC400V	380-440		910

Note 1 : Add "SA" to the end of the type name to order the operation coil surge absorber mounting type (varistor).
Example: S-T10SA AC100V

Note 2 : Even when the single rating (example: 200V60Hz) is specified for an order, the above rating voltage is indicated on the product.

Coil types and ratings (DC operated type)

● For SD-T12 to T100 types For SRD-T5 and T9 types

Coil designation	Rated voltage	Coil indication
DC12V	DC12V	Rated voltage
DC24V	DC24V	
DC48V	DC48V	
DC100V	DC100V	
DC110V	DC110V	
DC125V	DC120-DC125V	
DC200V	DC200V	
DC220V	DC220V	

Note 1: The operating coil terminal has a polarity (excluding T35 to T100 types). Connect the positive side to terminal number A1 (+) and the negative side to A2 (-).

Note 2: If the operation power supply is a rectifier, open and close the coil on the DC side.

● For SD-T12SA to T50SA types For SRD-T5SA and T9SA types

Coil designation	Rated voltage	Coil indication	Varistor voltage [V]
DC12V	DC12V	Rated voltage	47
DC24V	DC24V		47
DC48V	DC48V		120
DC100V	DC100V		470
DC110V	DC110V		470
DC125V	DC120-125V		470
DC200V	DC200V		470
DC220V	DC220V		470

Note 1: If the type with surge absorber for operation coil (varistor) is required, add "SA" to the end of the model when placing your order. Example: SD-T21SA 100VDC

Note 2: The operating coil terminal has a polarity (excluding T35SA to T50SA types). Connect the positive side to terminal number A1 (+) and the negative side to A2 (-).

Note 3: Variations other than the above cannot be manufactured.

Contact Reliability

Contact reliability of main and auxiliary contacts

The minimum working voltage and current of the main and auxiliary contacts of the S-T type Magnetic Contactors and the contact of the SR-T type Contactor Relays vary depending on the allowable failure rate. Apply the following diagrams.

■ The contact reliability reduces when a contact is connected in series or when the current is applied and broken at the time of opening and closing the contact. Prescribe remedies such as connecting the contact in parallel (providing redundancy).

■ If a reliability higher than the contact reliability given in Diagram 1 to Diagram 4 is required, the contacts must be connected in parallel (redundant).

● Magnetic Contactors

Diagram 1. S(D)-T main contact

Diagram 2 S(D)-T, UT-AX11 auxiliary contacts

Diagram 3 UT-AX2/4 auxiliary contact

Diagram 4. SR(D)-T5, T9

Note 1: The contact reliability indicates the failure rate λ 60 (the number of failures/the number of opening and closing operations, per contact) at 60% reliability standard.

This reliability is applied when the product is in use under a clean atmosphere in the standard specification environment (Refer to page 14).

Note 2: The contact resistance of the contacts may change due to economical corrosion and that may affect the contacts in the case of a light load.

It is recommended that regular inspections to be conducted, with load opening and closing performed several times in the inspection, and that consideration be provided on the system side.

Precautions for Use

Thermal Overload Relays

Disassembly

The Thermal Overload Relays are adjusted at the time of assembly. Do not disassemble it.

Ambient temperature compensation

The TH-T type Thermal Overload Relays are adjusted with the Magnetic Starters in the standard box (the MS type) relative to the ambient temperature of 20°C (The temperature on the control board of the MSO type Magnetic Starters is 35°C). The ambient temperature compensator is mounted on the TH-T type Thermal Overload Relays. Therefore, the ambient temperature less affects the operational characteristic change. The minimum operating current change according to the ambient temperature change relative to the ambient temperature of 20°C (the temperature on the control board of 35°C) generally depends on the characteristics in the diagrams 1 and 2.

The Thermal Overload Relays have a characteristic that the operating current becomes high when the ambient temperature is low and becomes low when the ambient temperature is high. If the ambient temperature of the installation site is significantly different from 20°C (the temperature on the control board of 35°C), the setting current of the Thermal Overload Relays needs to be corrected as shown in diagrams 1 and 2. In addition, note that the compensation factor has a characteristic to be the minimum scale>middle scale>maximum scale at the adjustment knob location. (Note that the Thermal Overload Relays may operate at a current of less than 100% stabilized current if in use at temperatures exceeding the allowable working temperature of 40°C (55°C).)

Diagram 1. Ambient temperature compensation curve (T18 frame)

Diagram 2. Ambient temperature compensation curve (T25,T50,T65,T100 frame)

Compensation factor: Percentage of the minimum operating current at the ambient temperature of 20°C(the temperature on the control board of 35°C)

<Compensation procedure of setting current>

Determine the compensation factor of the working ambient temperature according to the curves in diagrams 1 and 2 and use the value of all load currents of the motor divided by the determined compensation factor as the stabilization value.

Example: The ambient temperature compensation factor for TH-T25 at the ambient temperature of 40°C (the temperature on the control board of 55°C) is 97% at the minimum scale according to diagram 2. If the motor rated current is 15A, the stabilization value is 15.5A (=15/0.97.)

Note 1: [*1] The ambient temperature applied to the MS type indicates the outside temperature of the box.

[*2] The temperature including temperature increase on the control board applied to the MSO type is indicated.

Connecting electric wire size and operating current

The TH-T type adjusts the minimum operating current with the standard electric wire size shown in the following table. If the electric wire is thicker or thinner than this standard electric wire size, the operating current becomes high or low, respectively. Therefore, correct the stabilized current (divide it by the change rate of the minimum operating current) to use a size different from the standard connecting electric wire size.

Model name	Heater designation [A]	Standard electric wire size [mm ²]	Connecting electric wire size [mm ²]	Change rate of minimum operating current [%]
TH-T18(KP)	0.12 to 15	2	1.25 2.5	98 103
TH-T25(KP)	0.24 to 11	3.5	2 6	97 104
TH-T25(KP)	15, 22	8	5.5 14	96 104
TH-T50(KP)	29	14	8	95
	35	3.5	2 5.5	95 105
TH-T65(KP)	22, 29	5.5	3.5 8	96 105
	35	8	5.5 14	95 105
	42	14	8 22	95 104
	54	22	14 30	96 104
TH-T100(KP)	67	22	14 30	97 103
	82	38	30	97

	TH-T100	67 (54 to 80)
T100	TH-T65	15 (12 to 18), 22 (18 to 26), 29 (24 to 34), 35 (30 to 40), 42 (34 to 50), 54 (43 to 65)
	TH-T100	67 (54 to 80), 82 (65 to 100)

Note 1: Select the value closer to the heater designation if the stabilized current has two values.

Note 2: Heater designation marked with * has Magnetic Starters frames that cannot be applied. For information on the applicable Magnetic Starters frames, refer to the "Heater rating (designation) of standard Thermal Overload Relays" field in the above table.

Note 3: The connection conductor kit UN-TH21 is required to use in combination with the Magnetic Contactor to make a Magnetic Starters.

	T100SR	T100KPSR	—	—	67(54 to 80) 82(65 to 100)

Note 1: Combining UT-HZ18 allows the T18 frame to be used singly (screw mounting or IEC 35 mm rail mounting).
Combining UN-RM20 allows the T25 frame for single mounting to have the IEC 35mm rail mounted.

Contactor Relays

Specification List

Model name				SR-T5	SRD-T5	SR-T9	SRD-T9
Number of poles				5		9	
Contact arrangement				5a		9a	
				4a1b		7a2b	
				3a2b		5a4b	
Rated insulation voltage [V]				690			
Applicable standard				IEC60947-5-1,EN60947-5-1,JIS C8201-5-1,GB14048.5			
Rated impulse withstand voltage [kV]				6			
Rated frequency [Hz]				50/60			
Pollution degree				3			
Contact rating (Note 1)	AC rated operational current [A]	Category AC-15 (Coil load)	120VAC	6			
			240VAC	3			
			440VAC	1.5			
			550VAC	1.2			
		Category AC-12 (resistive load)	120VAC	10			
			240VAC	8			
			440VAC	5			
			550VAC	5			
	DC rated operational current [A]	Category DC-13 (large coil load)	24VDC	3			
			48VDC	1.5			
110VDC			0.6(2)				
220VDC			0.3(0.8)				
	Category DC-12 (resistive loads)	24VDC	10				
		48VDC	8				
		110VDC	5(8)				
		220VDC	1(3)				
Minimum applicable load level				20V 3mA			
Performance	Mechanical durability [ten thousand times]			1,000			
	Electrical durability [ten thousand times]			50			
	Switching frequency [time/hour]			1,800			
Characteristic	Coil consumption (Note 3)	Inrush [VA]		45	-	45	-
		Sealed [VA]		7	-	7	-
	Power consumption (Note 3) [W]			2.2 (Note 3)	3.3(2.2) (Note 4)	2.2 (Note 3)	3.3 (Note 4)
	Time constant [mg]			-	40(45) (Note 4)	-	40(45) (Note 4)
Optional unit (Note 2)	Surge absorber unit			○		○	
	Additional auxiliary contact block			○		×	
	IEC 35mm rail mounting			○		○	

Note 1: The value in brackets indicates the current when switching the load with two poles installed in series.

Note 2: In the optional unit field, ○ and X indicate mountable and non-mountable, respectively.

Note 3: Coil consumption are average values in case of applying 220V60Hz to AC200V coil.

Note 4: Coil consumption are average values in case of DC200V coil. The value in brackets indicates average values in case of DC12V and DC24V coil.

Contactor Relays

Contact arrangement/Contact placement

Model name	SR-T5 SRD-T5	SR-T9 SRD-T9
Contact arrangement	5a	9a
	4a1b	7a2b
	3a2b	5a4b
Contact placement	 5a	 9a
	 4a1b	 7a2b
	 3a2b	 5a4b

Combination with additional auxiliary contact block

The SR-T series contactor type Contactor Relay is usable in combination with the following additional auxiliary contact blocks.

Auxiliary contact blocks		Front clip-on						Side clip-on	
		UT-AX4			UT-AX2			UT-AX11	UT-AX11
Model name	Contact arrangement	4a	3a1b	2a2b	2a	1a1b	2b	1a1b+1a1b	1a1b
SR-T5 SRD-T5	5a	9a	8a1b	7a2b	7a	6a1b	5a2b	7a2b	6a1b
	4a1b	8a1b	7a2b	6a3b	6a1b	5a2b	4a3b	6a3b	5a2b
	3a2b	7a2b	6a3b	5a4b	5a2b	4a3b	3a4b	5a4b	4a3b

Note 1: The auxiliary contact blocks cannot be mounted on SR(D)-T9.

Note 2: The Contactor Relay is not usable with front clip-on and side clip-on blocks mounted at the same time.

Note 3: The contact arrangements in  are standard combinations.

Optional Units

Model list (for MS-T series)

Model name		Auxiliary contact blocks			Operation coil surge absorber unit				
Type		UT-AX4	UT-AX2	UT-AX11	UT-SA21	UT-SA22	UT-SA13	UT-SA23	UT-SA25
Mounting		Front clip-on		Side clip-on	Mounting on top				
Specification/ Function		Twin contact built-in 4-pole auxiliary contact (4a, 2a2b, 3a1b)	Twin contact built-in 2-pole auxiliary contact (2a, 1a1b, 2b)	Twin contact built-in 2-pole auxiliary contact (1a1b)	Operation coil surge absorber				
					With varistor 24VAC (Shared with DC) 48VAC (Shared with DC) 200VAC (Shared with DC) 400VAC	With varistor + indicating LED 200VAC (Shared with DC)	With CR DC200V	With CR AC200V	With varistor + CR 48VAC (Shared with DC) 200VAC (Shared with DC)
Appearance (Typical example)									
		UT-AX4	UT-AX2	UT-AX11	UT-SA21				
Applied model	Magnetic Starters	S-T10~T50/SD-T12~T50							
	Magnetic Contactors	MSO-T10~T25/MSOD-T12~T21							
	Contactor Relays	SR(D)-T5				SR(D)-T5/T9			
	thermal relay	-							

Model name		Mechanical interlocks		Single mounted unit	Main circuit conductor kit		
Type		UT-ML11	UT-ML20	UT-HZ18	UT-SD10	UT-SD20	UT-SD25
Mounting		Side clip-on		-	-		
Specification/ Function		Combining it with two single Magnetic Contactors configures the reversing type. ML11 is the electrical interlock 2b contact built-in type.		When used in combination with the thermal relay, screw mounting and mounting on the IEC35mm rail are possible.	Conductor unit used for reversible connection *6 conductors/set (Note 2) (Note 3)		
Appearance (Typical example)							
		UT-ML11		UT-HZ18	UT-SD10

	DC110V	5(8)				
	DC220V	1(3)				
Minimum applicable load level			5V 3mA		20V 3mA	
Performance	Mechanical durability [ten thousand times]		1,000			
	Electrical durability [ten thousand times]		50			
Switching frequency [time/hour]			1,800			
Terminal screw size/type			M3.5 cross slot screw with pressure plate			
Applicable electric wire size [φmm,mm²]			φ1.6 0.75 to 2.5			
Applicable crimp lug size			1.25-3.5 to 2-3.5			
Terminal screw tightening torque [N·m]			0.9 to 1.5			

Note 1: It is not possible to mount both the front clip-on and side clip-on units at the same time.

Note 2: The value in brackets indicates the current when switching the load with two poles installed in series.

● UT-SA□ Operation Coil Surge Absorber Unit

Types and application

Surge absorber element	Model		Internal element specifications	Applicable voltage range																
	Designation	AC 50/60Hz								DC										
		12V		24V	50V	100V	127V	200V	240V	346V	480V	12V	24V	48V	60V	100V	125V	200V	220V	
Varistor	UT-SA21	AC24V	Varistor voltage47V																	
		AC48V	Varistor voltage120V																	
		AC200V	Varistor voltage470V																	
		AC400V	Varistor voltage910V																	
Varistor + indicating LED	UT-SA22	AC200V	Varistor voltage470V																	
CR	UT-SA13	DC200V	0.5 μ F120Ω																	
	UT-SA23	AC200V	0.2 μ F120Ω																	
Varistor +CR	UT-SA25	AC48V	Varistor voltage120V 0.1 μ F47Ω																	
		AC200V	Varistor voltage470V 0.1 μ F47Ω																	

□ Applicable voltage ■ Rated voltage range

Note: The surge suppression effect for the applied circuit is smaller in the □ (applicable voltage) range than in the ■ (recommended voltage) range. Even in the ■ (recommended voltage) range, the surge suppression effect may not be enough depending on the characteristics of the connected device. (Check the influence of surge using the actual device in advance.)

Application and selection

Model	Applicable model	
	Magnetic Contactor	Contact Relay
UT-SA21	S-T10, T12, T20, T21, T25, T32, T35, T50 SD-T12,T20,T21,T32, T35, T50	SR-T5,T9 SR(D)-T5,T9
UT-SA22		
UT-SA13		
UT-SA23		
UT-SA25		

Precautions for application

- (1) Connect the terminals of surge absorber unit in parallel with the operation coil of the Magnetic Contactor or Contact Relay.
- (2) When used in combination with the surge absorber, the open time of the Magnetic Contactor or Contact Relay may be 1.5 to 3 times longer.
- (3) The surge absorber is designed to suppress the surge from the Magnetic Contactor. The warranty does not cover external surges. Extreme external surges may damage the product.

● UT-ML□ Mechanical Interlock Unit

Application

Model	Applicable Magnetic Contactor model
UT-ML11	S-T10, T12, T20
UT-ML20	SD-T12, T20
UN-ML21 (Note1)	S-T21, T25, T32, T35, T50, T80 SD-T21, T32, T35, T50, T80
UN-ML80	S-T100, SD-T100

Note 1: Use UN-ML21 of the MS-N Series as the mechanical interlock unit for S-T21 to T32.

Specifications

Model	UT-ML11
Rated insulation voltage	690V
Rated impulse withstand voltage	6kV
Rated frequency	50/60Hz
Pollution degree	3
Terminal screw size/type	M3.5 cross slot screw with pressure plate
Applicable electric wire size[ϕ mm,mm ²]	ϕ 1.6 0.75 to 2.5
Applicable crimp lug size	1.25-3.5 to 2-3.5
Terminal screw tightening torque[N·m]	0.9 to 1.5

Mounting

Hole drilling dimension

(Drilling of holes is not required when mounting the IEC 35mm rail mountable model is mounted to the IEC 35mm rail for reversing.)

Model	Applicable frame	Dimension[mm]		
		A $\pm$ 0.2	B $\pm$ 0.2	C $\pm$ 0.3
UT-ML11	T10	74	—	60
	S-T12, T20	89	—	60
UT-ML20	SD-T12, T20	89	—	60

Model	Applicable frame	Dimension[mm]		
		A $\pm$ 0.2	B $\pm$ 0.2	C $\pm$ 0.3
UN-ML21	T21, T25	54(54)	19(19)	60(56)
	T35, T50	65	20	70
	S-T32	30	23	60
	SD-T32	32	21	67
UN-ML80	S-T100	80	57	80
	SD-T100	80	57	80

● UT-HZ18 (BC) Independent mounting unit for thermal relay

Type and applicable model

Model	Mounting	Applicable model
UT-HZ18	Screw mounting	TH-T18(KP)
UT-HZ18BC	IEC 35mm rail mounting	TH-T18BC(KP)
UN-RM20	IEC 35mm rail mounting	TH-T25(BC)(KP), TH-T25(BC)(KP)SR

Note 1: □BC is the model with wiring streamlining terminal.

●UT-SD□ Main Circuit Conductor Kit

Types and Application

Applicable magnetic contactor frame	Reversible type	Crossover type	
			
	T10	UT-SD10	UT-SG10
	T12, T20	UT-SD20	UT-SG20
	T21, T25	UT-SD25	UT-SG25
Remarks	The kit contains six conductors per set. Power supply side and load side conductors are available, and therefore care should be taken when connecting.	The kit contains three conductors per set. The conductors can also be connected to the power supply terminal.	

●UT-SA33□ Main Circuit Surge Absorber Unit

Types

Model	Mounting method	Internal element specifications	Rated voltage/ frequency	Applicable model
UT-SA3320	Mounting on head	(0.3μF+60Ω)×3	AC240V 50/60Hz	S-T10, T12, T20 (BC) SD-T12, T20 (BC)
UT-SA3332				S-T21, T25, T32 (BC) SD-T21, T32 (BC)
UN-SA33	Independent mounting	(0.5μF+50Ω)×3		S-T10(BC)~T100
				SD-T12(BC)~T100

Specifications

Withstand voltage		Insulation resistance	Superimposed pulse conditions (maximum)		Maximum applied voltage	Mechanical resistance (Type mounted on head)
Across terminals	Across terminal and case		Peak value	Pulse width		
600VAC for one minute	2000VAC for one minute	300M Ω or more	2000V	1 μ sec.	800V	Ten million times

Notes for use

- (1) Do not use this unit in a circuit with high frequency elements, such as an inverter circuit.
- (2) Do not use this unit on the load side of a device with low contact capacity, such as a relay.

Connection

Internal connection	Connection example	
	3-phase circuit	Single-phase circuit
		

● UT/UN-SY□ DC/AC Interface Unit for Operation Coils

Model

Unit model	Output method	Unit mounting method	Applicable magnetic contactor, magnetic relay model
UT-SY21	No-contact output (Triac output)	Additional mounting on top	S-T10~T50
UT-SY21BC			
UT-SY22	Contact output (Relay output)	Independent mounting	S-T10~T100
UT-SY22BC			
UN-SY11	No-contact output (Triac output)	Independent mounting	S-T10~T100
UN-SY12	Contact output (Relay output)		
UN-SY31	No-contact output (Triac output)	Additional mounting on top	S-T65, T80
UN-SY32	Contact output (Relay output)		

Note 1. A coil voltage nominal of 100VAC, 100V or 200VAC can be applied for the operation coil.

Specifications

Model			UT-SY21	UT-SY22	UN-SY11	UN-SY31	UN-SY12	UN-SY32
Input section	Rated working voltage		DC24V					
	Tolerable voltage fluctuation		85% to 110% of rated working voltage

*1. The applicable current for the heater nominal 15A is 16A or less.

*2. When using 6AWG, use a copper wire with wire temperature rating of 75° C.

*3. Use a copper wire with wire temperature rating of 75° C.

*4. Please use swaging tool which is recommended by JST.

*5. Two conductors of the same size can be connected.

US Export Control Panel SCCR

1. SCCR

Initials for the Short Circuit Current Rating, it refers to the magnitude of the short-circuit current that the device or equipment can withstand.

2. Short-Circuit Performance of Control Panels and SCCR

(1) Short-Circuit Performance of Control Panels

On the name plate of a control panel, the value that represents the short-circuit performance of the control panel is given along with the manufacturer's name, rated voltage, number of phases, frequency, full load current, etc. When using the control panel, the estimated short-circuit current at the panel entry must be smaller than the short-circuit performance displayed on the name plate.

(2) Control Panel SCCR

Conventionally, the breaking capacity of overcurrent protection devices such as circuit breakers and fuses to be installed on the inlet port has been used as the short circuit performance of control panels (Figure 1 a) reference). However, due to the revision of the NEC (National Electric Code: the US equivalent of electrical equipment standards) in 2005, SCCR is now displayed as the short circuit performance of control panels rather than the breaking capacity of overcurrent protection devices of the inlet port.

Typically, some sort of "coordination" between devices ("protection coordination" when including a protection device) is required when constructing an electrical system by combining several electrical devices. When considering the coordination of the entire control panel and especially during a short circuit, exactly what indicators are appropriate? Can the breaking capacity of the overcurrent protection device on the inlet port explain the short circuit coordination of the control panel? One of the solutions to such questions is SCCR.

3. Method of Determining SCCR

(1) Method of Determining SCCR

The method of determining SCCR is defined in Section 409 of NEC, but SCCR is commonly determined using the UL508A Supplement SB.

(2) UL508A SB

UL508A SB regulates the next steps.

- ◆ Determine SCCR for individual power circuit components.
- ◆ Correct SCCR for each current-limiting element.
- ◆ Determine SCCR for the entire control panel.

Details for each are described below.

(1) Determine SCCR for power circuit components.

Power circuit refers to circuits of motors, heaters, lighting, etc. Power transformers, reactors, CTs and the like are not included.

SCCR of individual components is determined by one of the following methods.

- Values displayed in rating plates, instruction manuals, etc.
- Default values in SB Table 4.1
- * For example, Circuit Breaker: 5 kA, Magnetic Starter (for motors with 50 hp or less): 5 kA, etc.
- For load controllers, motor overload relays and combination motor controllers, the values verified in the performance requirements in accordance with the provisions of UL60947-4-1A or UL508, and mentioned in the procedure of the manufacturer

(2) Correction for Transformer Capacity and Secondary Side SCCR

For SCCR of target circuits of the following cases, this is SCCR of devices on the transformer primary side.

- a) In cases where the short-circuit current ratings and breaking ratings of all components of the secondary side are larger than the calculated value of the short-circuit current directly below the power transformer secondary side. For impedance, use either what is known or calculate by assuming that the impedance is 2.1 %.
- b) In cases where the short-circuit current ratings and breaking ratings of all components of the secondary side are larger than the values on the table as specified in UL 508A SB
- c) If it does not correspond to a / b above, the smallest SCCR of the transformer secondary side will be SCCR of the transformer primary side.

(3) Correction for Current Limiting Circuit Breaker and Current Limiting Fuse

When the feeder circuit has a current-limiting circuit breaker or current-limiting fuse, SCCR will be one of the following depending on the conditions of the branch circuit.

- a) If SCCR of all components of the branch circuit is equal to or greater than the passing current peak value I_p of the current-limiting circuit breaker or current-limiting fuse and SCCR of the branch circuit protection devices is equal to or greater than SCCR of the current-limiting circuit breaker or current-limiting fuse, SCCR of the current-limiting circuit breaker or current-limiting fuse of the feeder circuit will be SCCR of the branch circuit.
- b) If SCCR of all components of the branch circuit is equal to or greater than the passing current peak value I_p of the current-limiting circuit breaker or current-limiting fuse and SCCR of the branch circuit protection devices is less than SCCR of the current-limiting circuit breaker or current-limiting fuse, the smallest SCCR of the branch circuit protection device will be SCCR of the branch circuit.
- c) In conditions other than a / b above, the smallest SCCR of all components of the branch circuit will be SCCR of the branch circuit.

Short-circuit Current Rating for Magnetic Contactor and Thermal Relay (SCCR)

■ Short-Circuit Current Rating (SCCR) of Thermal Overload Relays By using with a fuse or circuit breaker that satisfies the rated current and rated breaking current shown in the table below, the short-circuit current rating (SCCR) in the table below can be applied to thermal overload relays.

Magnetic contactors Model	Main circuit voltage:600VAC maximum		Main circuit voltage:240VAC maximum				Main circuit voltage:480VAC maximum

Type Codes

* For the information on type codes for orders, check the note in Order Procedure.

Enclosed Magnetic Starters

Open type Magnetic Starters

Magnetic Contactors

Thermal Overload Relays

Contactor Relays

Optional Units

Order Procedure

Note

For orders, specify products as shown below. Insert a space where ▲ is present. If adding multiple two-character codes (such as SA, BC, and KP) after a frame size (T10 or others) of type name, specify them in alphabetical order of the first letters. (Example: MSO-T10BCKPSA)
(If they are not in alphabetical order, the type code is automatically changed.)

Enclosed Magnetic Starters

●MS-(2×)T type

Model name	motor capacity	Main circuit voltage	Operation coil designation or operation circuit voltage	Auxiliary contact
MS-T21	▲ 3.7kW	▲ 200V	▲ AC200V	▲
MS-T10		▲ 200V	▲ AC200V	▲ 1B
Refer to page 18,50.	Select from page 18,26.	Do not add AC to the main circuit voltage. (To distinguish it from the operation circuit voltage)	Select coil designation from pages 22 or specify the working operation circuit voltage.	Select the auxiliary contact arrangements from page 18.

Standard (AC operated) Magnetic Starters

●MSO-(2×)T type

Model name	Heater designation (setting current)	Main circuit voltage	Operation coil designation or operation circuit voltage	Auxiliary contact
MSO-T21	▲ 3.7kW	▲ 200V	▲ AC200V	▲
MSO-T10	▲ 9A	▲ 200V	▲ AC200V	▲ 1B
Refer to page 18,20,50.	Select from page 18,20,26.	Do not add AC to the main circuit voltage. (To distinguish it from the operation circuit voltage)	Select coil designation from pages 22 or specify the working operation circuit voltage.	Select the auxiliary contact arrangements from page 18,20.

Standard (AC operated) Magnetic Contactors

●S-(2×)T types

Model name	Operation coil designation or operation circuit voltage	Auxiliary contact
S-T20	▲ AC200V	▲ 2A
S-T20	▲ AC100V50Hz	
Refer to page 18,20,50.	Select coil designation from pages 22 or specify the working operation circuit voltage.	Select the auxiliary contact arrangements from page 18,20.

Contactor Relays

●SR-T types

Model name	Operation coil designation	Contact arrangement
SR-T5	▲ AC200V	▲ 3A2B
SR-T5	▲ AC100V50Hz	▲ 4A1B
Refer to page 34.	Select coil designation from pages 22 or specify the working operation circuit voltage.	Designate the contact arrangement listed on page 34.

Thermal Overload Relays

●TH-T type

Model name	Heater designation
TH-T18KP	▲ 15A
Refer to page 51.	Refer to page 26 and designate the heater nominal.

Optional Units

●UT-AX□ auxiliary contact block

Model name	Contact arrangement
UT-AX4	▲ 2A2B
Refer to page 37.	Designate the contact arrangement listed on page 37 for the UT-AX2/AX4. UT-AX11 does not need to be designated as 1A1B is fixed.

●UT-SA□ Operation Coil Surge Absorber Unit

Model name	Voltage nominal
UT-SA21	▲ AC400V
UT-SA22	▲ AC200V
UT-SA25	▲ AC48V
Refer to page 38.	Select according to the operation circuit voltage.

●UT-ML□ Mechanical Interlock Unit

Model name
UT-ML11
Refer to page 39.

●UT-SY□ (BC) type DC/AC interface unit for operation coil

Model name
UT-SY21
UT-SY21BC
Refer to page 41.

●UT-HZ18 (BC), UN-RM20 type Independent mounting unit for thermal relay

Model name
UT-HZ18
UT-RM20
Refer to page 39.

Non-reversing Magnetic Starter (enclosed)

Enclosure (case): Steel
Paint color: Munsell 5Y7/1
Protective structure: IP20

● MS-T10 type (0.74kg)

● MS-T12 type (0.76kg)

Note 1) The above figure gives an example of when the main circuit and operating circuit use the same power supply.
The solid line is already wired. The dashed line and two-dot chain line sections must be wired.
(Use the wires enclosed with the unit to wire the two-dot chain line sections.)

Note 2) If the power supply is different for the main circuit and operating circuit, do not wire between the dashed line 1/L1 and OFF button and between the two-dot chain line 3/L2 and TH95. Wire to the OFF button and TH95 terminal from a different operating circuit power supply.

1. When mounting the MS-T10 to T50 types, leave 100mm of space below the box.
- *2. The MS-T10 to T50 types have three rubber bushings enclosed.

● MS-T21, T25 type (1.12kg)

Note 1) The above figure gives an example of when the main circuit and operating circuit use the same power supply.
The solid line is already wired. The dashed line and two-dot chain line sections must be wired.
(Use the wires enclosed with the unit to wire the two-dot chain line sections.)

Note 2) If the power supply is different for the main circuit and operating circuit, do not wire between the dashed line 1/L1 and OFF button and between the two-dot chain line 3/L2 and TH95. Wire to the OFF button and TH95 terminal from a different operating circuit power supply.

- *1. When mounting the MS-T10 to T21 types, leave 100mm of space below the box.
- *2. The MS-T10 to T21 types have three rubber bushings enclosed.

● MS-T35, T50 type (1.8kg)

Note 1) The above figure gives an example of when the main circuit and operating circuit use the same power supply.
The solid line is already wired. The dashed line and two-dot chain line sections must be wired.
(Use the wires enclosed with the unit to wire the two-dot chain line sections.)

Note 2) If the power supply is different for the main circuit and operating circuit, do not wire between the dashed line 1/L1 and OFF button and between the two-dot chain line 3/L2 and TH95. Wire to the OFF button and TH95 terminal from a different operating circuit power supply.

● MS-T65 to T100 type (1.8kg)

Note 1) The above figure gives an example of when the main circuit and operating circuit use the same power supply.
The solid line is already wired. The dashed line and two-dot chain line sections must be wired.
(Use the wires enclosed with the unit to wire the two-dot chain line sections.)

Note 2) If the power supply is different for the main circuit and operating circuit, do not wire between the dashed line 1/L1 and OFF button and between the two-dot chain line 3/L2 and TH95. Wire to the OFF button and TH95 terminal from a different operating circuit power supply.

Reversing Magnetic Starter (enclosed)

Enclosure (case): Steel
Paint color: Munsell 5Y7/1
Protective structure: IP20

● MS-2×T21,T25 type (2.0kg)

*1. The MS-2×T21 to T50 type has three rubber bushings enclosed.

Note 1) The above figure gives an example of when the main circuit and operating circuit use the same power supply.
The solid line is already wired. The dashed line and two-dot chain line sections must be wired.
(Use the wires enclosed with the unit to wire the two-dot chain line sections.)

Note 2) If the power supply is different for the main circuit and operating circuit, do not wire between the dashed line 1/L1 and STOP button and between the two-dot chain line 3/L2 and TH95. Wire to the STOP button and TH95 terminal from a different operating circuit power supply.

● MS-2×T35 to T100 type

Note 1) The above figure gives an example of when the main circuit and operating circuit use the same power supply.
The solid line is already wired. The dashed line and two-dot chain line sections must be wired.
(Use the wires enclosed with the unit to wire the two-dot chain line sections.)

Note 2) If the power supply is different for the main circuit and operating circuit, do not wire between the dashed line 1/L1 and OFF button and between the two-dot chain line 3/L2 and TH95. Wire to the OFF button and TH95 terminal from a different operating circuit power supply.

Contact arrangement

The diagram illustrates the contact arrangement for a 2-pole, 3-phase contactor. It shows two main switch contacts (A2-A1 and A3-A1) and two auxiliary switch contacts (T1-T2 and T3-T2). The diagram includes terminal numbers (14, 22, 31, 32, 44, 55, 95, 96) and a note "CX will be attached." pointing to the auxiliary switch contacts.

*4 dimensions: Heater nominal 22A or less. *6 dimensions: Heater nominal 29A or more

- ## Reversing

Technical drawing of the terminal block showing dimensions and contact arrangement.

Dimensions:

- Installation holes for 3-M5 screws (indicated by a dashed line and arrow).
- Overall width: 216
- Distance between mounting holes: 204
- Mounting hole diameter: 8
- Terminal block height: 100
- Overall height: 115

Contact arrangement:

The contact arrangement is shown in two rows of terminals. The top row terminals are labeled A1, A2, 13, 21, 1/L1, 3/L2, 5/L3, 43, 31. The bottom row terminals are labeled 14, 22, 2/T1, 4/T2, 6/T3, 44, 32. The diagram shows the internal wiring connections between these terminals, including cross-connections between the top and bottom rows.

TH-T100(KP)SR

*1 applies for TH-N60(TA)KPSR.
When combining with the Magnetic Contactor, use the following connection conductor kit (optional).
Combination with S(D)-N50/N65, SL(D)-N50/N65: BH559N350
Combination with S-N80/N95, SL(D)-N80/N95: BH569N350
Combination with SD-N80/N95: BH569N352
TH-N60TA(KP)SR cannot be used with independent mounting.

[Notes for adopting the product]

Before purchasing and using our products, please confirm the following product warranty.

Period and scope of warranty

●Warranty period

- (1) The warranty period for our products shall be one year after purchase or delivery to the designated location. However the maximum warranty period shall be 18 months after production, in consideration that the maximum length of distribution period is to be 6 months after shipping.
- (2) This warranty period may not apply in the case where the use environment, use conditions, or the number of open/close operation times specifically impact the lives of products.

●Scope of warranty

- (1) When any failure occurs during the above warranty period which is clearly our responsibility, we will replace or repair the failed portion of the product free of charge at the location of purchase or delivery.
Note that the "failure" mentioned here shall not include such items as scratches and discoloration which do not affect performance.
- (2) In the following cases, even during the warranty period, charged repair services shall be applied.
 - ① Failures caused by inappropriate conditions, environment, handling, and uses other than those specified in catalogs, instruction manuals or specifications.
 - ② Failures caused by inappropriate installation.
 - ③ Failures caused by the design of customer's equipment or software.
 - ④ Failures caused by the customer tampering with our products such as reworks without our authorization.
 - ⑤ Failures caused by the customer failing to correctly maintain or replace components such as spare parts, as specified by documents such as instruction manuals.
 - ⑥ Failures caused by uses of the product other than ordinarily intended.
 - ⑦ Failures caused by force majeure such as fire and abnormal voltage accidents, and natural disasters such as earthquake, wind and flood.
 - ⑧ Failures caused by reasons that were unforeseeable by the level of technology at the time of shipment.
- (3) The warranty that is mentioned here shall mean warranty of the unit of delivery, and any losses induced by the failures of delivered products shall be excluded from our warranty.

●Failure diagnosis

In principle, primary failure diagnosis shall be conducted by the customer. However this job, if requested by the customer, can be performed by us or our service company with charge. In this case, a service fee shall be charged to the customer in accordance with our price list.

Recommendation for renewal due to life

Our Magnetic Starters and Magnetic Contactors with contacts and mechanical parts have certain wear life in line with the number of switching operations, while our coil wires and electronic parts have aging degradation life influenced by the use environment and use conditions.

Regarding the use of our Magnetic Starters and Magnetic Contactors, we recommend customers to renew the products every 10 years as a rule, provided that the products are used in

line with the number of open/close operations specified by this catalog or the instruction manual.

We also recommend to renew devices other than the Magnetic Starters and Magnetic Contactors described in this catalog every 10 years as a rule.

Exemption from warranty related to opportunity or secondary losses.

Regardless of in or out of warranty period, loss of opportunity and lost earnings at the customer side caused by the failures of our products, any damages caused by special situation regardless of our foreseeability, secondary losses, accident compensation, damages on anything other than our products, compensation to jobs including replacement work, readjustment of field machinery equipment, startup test run, etc. performed by customers, and damages caused by any reasons for which we are not held responsible, shall be outside the scope of our compensation.

Exemption from warranty related to opportunity or secondary losses.

- (1) The contents of products shown in this catalog are for your selection of models. When you actually use the product, read the "Instruction Manual" carefully beforehand and use correctly.
Please note that the external view or specifications that should not affect the model selection can change without preannouncement.
- (2) When using a product listed in this catalog, you are required to accept that your use should not lead to any serious accident if by any chance the product develops any failures or errors, and, in the event any failure or error occurs, backup or fail-safe functions are in place outside the device by the system.
- (3) The products described in this catalog are designed and manufactured as general products to be used for general industrial fields. For this reason, the products described in this catalog should not be used for the applications requiring special quality assurance systems, such as serious public uses as atomic power plants and other power plants owned by power companies, railway applications and government and public office applications.
Note, however, that the products shall be applicable to such uses if the use is limited and the customer agrees not to require specially high quality.
Furthermore, when the customer is investigating application for the uses where serious impact is foreseen to the human body and assets and therefore high reliability for security and control system is required, such as aviation, medical services, railways, combustion and fuel equipment, manned transportation equipment, entertainment facilities and security machines, please contact our representatives and discuss any necessary agreement or specifications.

Supply period of spare goods after production stop

- (1) For the discontinuation of production, we will announce in such media as "Sales and Service" paper created by us.

[Notes for security related issues]

- Before performing the installation, wiring works, operation and maintenance/check for the products described in this catalog, make sure to read the "Instruction Manual" or "Notes for Use" attached to the product for correct usage.
- With the MS-T Series, the parts such as the contact and coil cannot be replaced so do not modify or disassemble the product. Failure to observe this can lead to faults.
- In spite of our continued efforts to enhance the quality and reliability of our product, the product can fail. The products described in this catalog can bring about serious results, such as malfunctions of machinery, short circuit at power supply, and catching fire), by the malfunction caused by vibration, physical shock and improper wiring. Pay special attention to avoid any secondary accidents such as injuries and fire, as the result of failures or malfunctions.
- When you find any questions or you need more details after reading this catalog, please contact your dealer or our company.

[For using the products described in this catalog, please observe the following items.]

Danger

- Make sure to disconnect the power before you perform installation, removal, wiring works, or maintenance/checking. There is a risk of receiving an electric shock or occurrence of a malfunction.
- When the product is energized, avoid touching or coming near the product, especially the terminals having electricity. There is a risk of receiving an electric shock or burn injury.

Notes

- Use the product in the use environment described in this catalog and Instruction Manual. Do not install the product in any abnormal environment with high temperature, high humidity, dust, corrosive gas or excessive vibration/shock. There is a risk of catching fire, malfunctions, electric shock or failure.
- Avoid applying shocks by dropping or falling the product during transportation and unpacking. This will lead to breakage or failure of products.
- Do not use the product when it has received damage during transportation, installation or wiring. This can cause fire or malfunctions.
- Make sure that only technicians qualified for electric work or wiring should perform installation, wiring works and maintenance/checking of the product.
- Make sure that no foreign objects such as dust, iron powder and wire chips enter the product during installation and wiring works. There is a risk of contact failures and malfunctions leading to damage or fire at the load.
- When you use mounting screws of the wrong size or use a small number of screws than specified, or when the mounting to the rail of IEC 35mm width is defective, there is a risk that the product may fall.
- When you apply wiring works, be sure to use the wire size that suits the applied voltage, flow current and inrush current, and to fasten wires with the correct torque as specified in this catalog or the instruction manual. Defective wiring can cause fires, accidents and failures.
- To terminal screws and mounting screws, apply the torque as we specify for tightening, and regularly apply retorquing. When the tightening torque is too large, the work can damage terminal screws or mounting screws. When the terminal screws or mounting screws slacken or are broken, they can cause overheat or fire, or the body can fall off to create serious accidents.
- Confirm the rated values and specifications, and make sure to use a product that meets the requirements. When you use a product exceeding the rated/specified values, it may cause insulation breakdown leading to earth fault or short circuit accidents, or create the cause of fire by overheat or breakdown due to inability to shutdown.
- When a product described in this catalog is to be used in a facility where a failure can lead to injury to the human body or serious damage to earnings, make sure to install some safety mechanism.
- Apply regular checks to the product and use safety measures on the sequence to the critical circuits. The contacts of Contactors and Magnetic Starters can develop defective conduction, welding or burnout.
- Contactors and Magnetic Starters can create welding of contacts disabling the opening, due to such causes as switching operation for excessive current, abnormal wearing of contacts, chattering at operational instruction contacts, aging degradation and product life. Also the contacts may fail to open due to unexpected mechanical constraints other than contact adhesion. Since the disability of contact to open can cause the machine to go out of control, secure safety by assuming the mechanical constraints or contact welding leading to inability of open/close operations. There remains a risk of fire even when an overload protective device (Thermal Overload Relays) is provided.
- The example connection described in this catalog only shows a typical one to run a system. For the protection of each device and safety measures, the customer is requested to consider the connection for each system.
- Do not apply reworks to the product or disassemble the product. These may cause failures.
- When you dispose of the products, treat them as industrial waste products.

Information of Our FA-related Products

[Related Products]

Low-voltage switch | Mitsubishi Manual Motor Starter MMP-T Series

Now the Magnetic Contactor MS-T Series (DC operated type) can be combined with the Manual Motor Starter (MMP-T Series) that saves space while protecting the motor circuit (overload, open-phase, short-circuit)!

MMP-T32

What is the Manual Motor Starter?

The manual motor starter integrates the wiring breaker with the thermal relay functions and can be used on the motor circuit. A single module provides overload, open-phase and short-circuit protection.

Space-saving design helps downsize the panel

Examples of space saving

Wire-saving

Wiring work can be reduced by using the connection conductor unit (option) when wiring the manual motor starter and contactor. A conductor unit for connection to the high-sensitivity contactor (SD-Q) is also available. (Type: UT-MQ12)

Examples of wire-saving applications

Examples of wiring with wire

Example of wiring with connection conductor unit

Ease-of-use

A variety of optional units are available to meet your various needs.

Option configuration drawing

Model name	No.	Type	Explanation
Auxiliary contact (internal)	①	UT-MAX	With this unit, the contact operates in sequence with the unit's ON/OFF state.
		UT-MAXLL (for micro-loads)	
Warning contact (internal)	②	UT-MAL	With this unit, the contact operates in sequence with the unit's tripping action (regardless of cause).
		UT-MALLL (for micro-loads)	
Power supply block	③	UT-EP3	This unit connects the power supply circuit's wires.
		UT-2B4	
Bus bar	④	UT-3B4	This unit feeds power to two to three units.
		UT-2B5	
		UT-3B5	
Power supply side terminal cover	⑤	UT-CV3	Power supply side terminal cover for UL60947-4-1A, Type E/F.
Short-circuit display unit	⑥	UT-TU	This unit activates and displays in red only when the main unit trips with a short circuit. Required for application with UL60947-4-1A, Type E/F.
Connection conductor unit	⑦	UT-MT20	This unit electrically and mechanically connects and joins the MMP-T32 and Magnetic Contactor.
		UT-MT32	
		UT-MQ12	
		UT-MT20D	
		UT-MT32D	
Mounting base unit	⑧	UT-BT20	The combination starter is mounted on this plate when using the MMP-T32 and Magnetic Contactor combination. Both rail mounting and screw mounting are supported.
		UT-BT32	
		UT-BT32D	
Reversible connection unit	⑨	UT-RT10	This block mechanically connects two mounting base units.

PLC

MELSEC iQ-R Series

Revolutionary, next generation controllers building a new era in automation

- ◎High-speed, high-accuracy multiple CPU control system based on the iQ Platform
- ◎New high-speed system bus and inter-module sync realizes improved productivity and reduced TCO*
- ◎Reducing development costs through intuitive engineering (GX Works3)
- ◎Robust security features (such as security key authentication, IP filter)

Product Specifications

Program capacity	40K steps to 1200K steps
LD instruction speed	0.98 ns
Available modules	I/O, analog, high-speed counter, positioning, simple motion, network module
Control system architecture	Rack-mounted modular based system
Supported networks	Ethernet, CC-Link IE Control Network, CC-Link IE Field Network, CC-Link, RS-232, RS-422/485

*Total Cost of Ownership

HMI

Graphic Operation Terminal GOT2000 Series GT27 Model

To the top of HMIs with further user-friendly, satisfactory standard features.

- ◎Comfortable screen operation even if high-load processing (e.g. logging, device data transfer) is running. (Monitoring performance is twice faster than GT16)
- ◎Actual usable space without using a SD card is expanded to 128MB for more flexible screen design.
- ◎Multi-touch features, two-point press, and scroll operations for more user-friendliness.
- ◎Outline font and PNG images for clear, beautiful screen display.

Product Specifications

Screen size	15", 12.1", 10.4", 8.4", 5.7"
Resolution	XGA, SVGA, VGA
Intensity adjustment	32-step adjustment
Touch panel type	Analog resistive film
Built-in interface	RS-232, RS-422/485, Ethernet, USB, SD card
Applicable software	GT Works3
Input power supply voltage	100 to 240VAC (+10%, -15%), 24VDC (+25%, -20%)

AC Servo

Mitsubishi General-Purpose AC Servo MELSERVO-J4 Series

Industry-leading level of high performance servo

- ◎Industry-leading level of basic performance: Speed frequency response (2.5kHz), 4,000,000 (4,194,304p/rev) encoder
- ◎Advanced one-touch tuning function achieves the one-touch adjustment of advanced vibration suppression control II, etc.
- ◎Equipped with large capacity drive recorder and machine diagnosis function for easy maintenance.
- ◎2-axis and 3-axis servo amplifiers are available for energy-conservative, space-saving, and low-cost machines.

Product Specifications

Power supply specifications	1-phase/3-phase 200V AC, 1-phase 100V AC, 3-phase 400V AC, 48V DC/24V DC
Command interface	SSCNET III/H, SSCNET III (compatible in J3 compatibility mode), CC-Link IE Field Network interface, pulse train, analog
Control mode	Position/Speed/Torque/Positioning function/Fully closed loop
Speed frequency response	2.5kHz
Tuning function	Advanced one-touch tuning, advanced vibration suppression control II, robust filter, etc.
Functional safety	Conforms to functions of IEC/EN 61800-5-2, STO: Category 3 PL d, SIL 3 Conforms to Category 4 PL e, SIL 3 by a combination with MR-D30 functional safety unit
Compatible servo motor	Rotary servo motor (rated output: 0.01 to 55kW), linear servo motor (continuous thrust 50 to 3000N), direct drive motor (rated torque: 2 to 240N·m)

Information of Our FA-related Products

[Related Products]

Inverter

FR-A800 Series

High-functionality, high-performance inverter

- ◎Realize even higher responsiveness during real sensor-less vector control or vector control, and achieve faster operating frequencies.
- ◎The latest automatic tuning function supports various induction motors and also sensor-less PM motors.
- ◎The standard model is compatible with EU Safety Standards STO (PLd, SIL2). Add options to support higher level safety standards.
- ◎Control and monitor inverters via CC-Link/CC-Link IE Field Network (option interface).

Product Specifications

Inverter capacity	200V class: 0.4kW to 90kW, 400V class: 0.4kW to 500kW
Control method	High-carrier frequency PWM control (Select from V/F, advanced magnetic flux vector, real sensorless vector or PM sensorless vector control), vector control (when using options)
Output frequency range	0.2 to 590Hz (upper limit is 400Hz when using advanced magnetic flux vector control, real sensorless vector control, vector control or PM sensorless vector control)
Regenerative braking torque (Maximum allowable duty)	200V class: 0.4K to 1.5K (150% at 3%ED) 2.2K/3.7K (100% at 3%ED) 5.5K/7.5K (100% at 2%ED) 11K to 55K (20% continuous) 75K or more (10% continuous), 400V class: 0.4K to 7.5K (100% at 2%ED) 11K to 55K (20% continuous) 75K or more (10% continuous)
Starting torque	200% 0.3Hz (3.7K or less), 150% 0.3Hz (5.5K or more) (when using real sensorless vector, vector control)

Robot

MELFA F Series

High speed, high precision and high reliability industrial robot

- ◎Compact body and slim arm design, allowing operating area to be expanded and load capacity increased.
- ◎The fastest in its class using high performance motors and unique driver control technology.
- ◎Improved flexibility for robot layout design considerations.
- ◎Optimal motor control tuning set automatically based on operating position, posture, and load conditions.

Product Specifications

Degrees of freedom	Vertical:6 Horizontal:4
Installation	Vertical:Floor-mount, ceiling mount, wall mount (Range of motion for J1 is limited) Horizontal:Floor-mount
Maximum load capacity	Vertical:2-70kg Horizontal:3-20kg
Maximum reach radius	Vertical:504-2,050mm Horizontal:350-1,000mm

Low Voltage Circuit Breakers

Mitsubishi WS-V Series Molded Case Circuit Breakers, Earth Leakage Circuit Breakers

Technologies based on long year experience realize more improved performance.

- ◎The new electronic circuit breakers can display various measurement items.
- ◎Improvement of breaking performance with new breaking technology "Expanded ISTAC".
- ◎Compliance with global standard for panel and machine export.
- ◎Commoditization of internal accessories for shorter delivery time and stock reduction.

Product Specifications.

Ampere Frame	32-250A Frame
Applicable standard	Applicable to IEC, GB, UL, CSA, JIS and etc.
Expansion of UL listed product line-up	New line-up of 480VAC type with high breaking performance for SCCR requirement
Commoditization of internal accessories	Reduction of internal accessory types from 3 to 1
Commoditization for AC and DC circuit use	Common use of 32/63A frame in both AC and DC circuit
Compact size for easy to use	Thermal adjustable and electronic circuit breakers are same size as 250AF fixed type
Measuring Display Unit (MDU) breakers	MDU breakers measure, display and transmit energy data to realize energy management.
